

Tired of the old paper maps? Would you like to follow the path on your mobile phone but you don't know how to do it? Now you can!

The cycle paths are downloadable in a particular format, called gpx, which can only be used in some apps. If you want to use your mobile phone as a navigator, here you can find three solutions:

1. **EASYTRAILS**, which can be downloaded from the Apple Store (at a cost of €4.99, FREE lite version) or from Play store (at a cost of €2.99), is definitely the best. After downloading the application, just download the .gpx file from our website and import it into the EasyTrails application. This App will allow you to follow the path, give you voice directions and much more. For more information, please visit <http://www.easytrailsgps.com/it/>

2. **GPSies** is a totally **free** app. Once downloaded, look for the routes loaded by the user "EuropaSilvella", select the type of activity (bike tour, walking path) and you will see all our routes.

3. You can rent the **Garmin Edge Explore** at our Reception: from this year the Europa Silvella campsite offers the possibility of renting a bicycle navigator, at a cost of €10 per day. On the navigator you will find the already pre-loaded routes or look for new ones. In addition, if you make a mistake or decide to take a detour, the navigator will recalculate the route so that you never get lost..
